

Kohiwood

Quality for various purposes

We specialise in the further processing of products based on customer needs. We understand how our customers operate and ensure that our products work effectively in their processes. Our products are always tailored to customer needs.

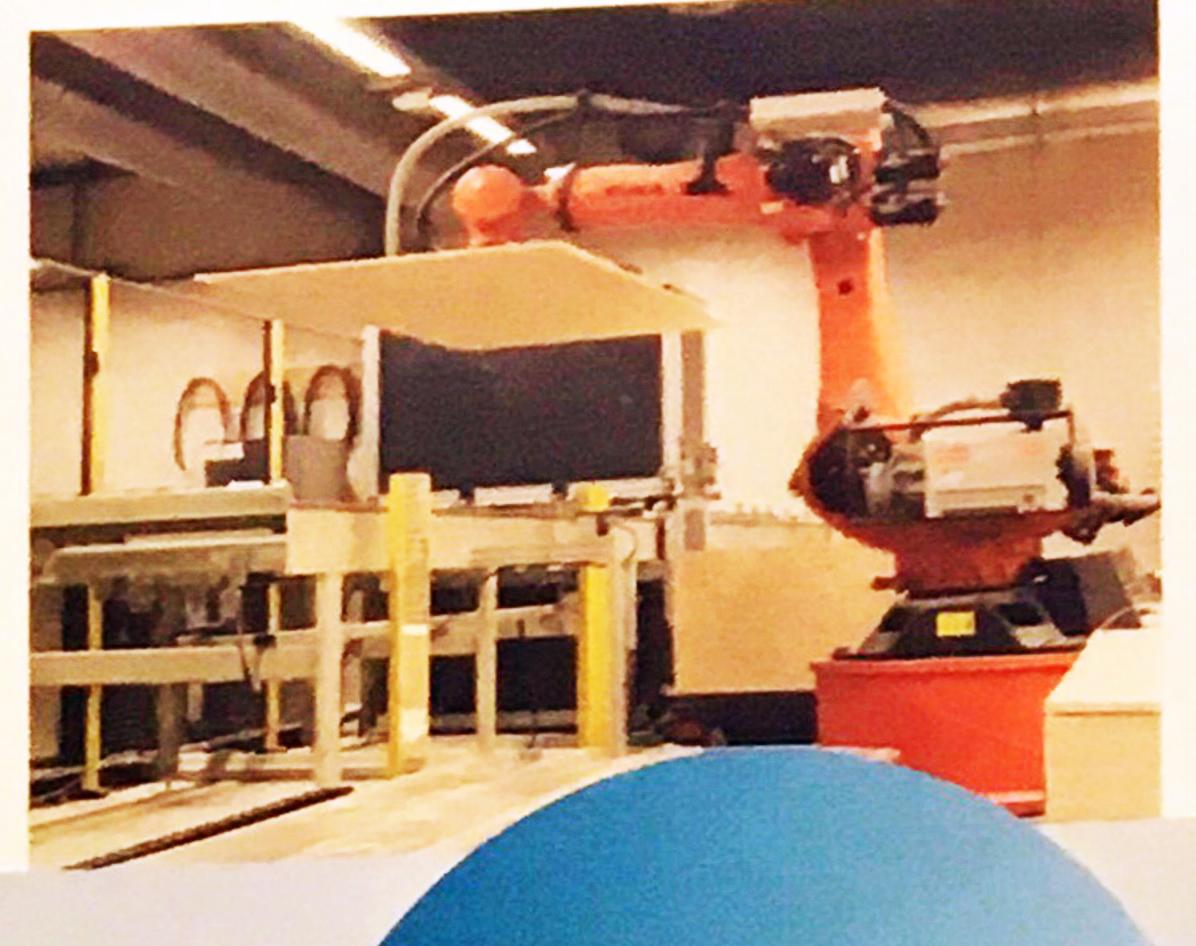

Our LamBoard brand provides panels and multipurpose modular furniture systems to DIY joiners.

Modern and efficient

We annually process 250,000 m³ of Finnish quality wood in two shifts.

Our production investments benefit our customers in terms of quality, speed and cost-effectiveness.

We always take the individual needs of customers into account, starting with raw material acquisition. Thanks in part to a high degree of automation, our production process is fast, streamlined and reliable.

Everything starts with the raw material. In our production, we exclusively use wood from small trees that is of uniform quality and sourced from Finland. Most of our products are made of pine, but we also use some spruce.

Innovative solutions for your production automation

We design and deliver both automatic and semi-automatic production lines and standalone machines. The solutions delivered by us are innovative and one step ahead. We have tens of years of experience in production automation solutions.

Our turnkey delivery consists of all project stages from need to designing, installation, training and maintenance service. Alternatively, we can modify your existing machinery to an automated solution by attaching robots and conveyors into the production line.

We deliver industrial robots for a payload of 3-1300 kg. In addition to the new robots we can offer you so called demo robots used only in testing or exhibition purposes. The overall delivery of one robot cell always consists of simulation, production of grippers or tools, cover fences, installation and implementation with operator training.

Long-lasting robots have reliable service organized by an importer. Regular service is included in the maintenance contract, and we can deliver spare parts for machinery we have designed and manufactured without any delay thanks to our own machining.

Besides our own machining, we offer you machining as a subcontractor.

Our competent personnel serve you in our brand-new machining facilities in Kalajoki.

Ecological and durable

A traditional piece of wooden furniture lasts for decades and has numerous options for reuse. At the end of its lifecycle, a wooden product can be easily disposed of by burning, which is also an environmentally friendly option.

Our modern methods are sensitive to nature and support the principles of sustainable development. We only use thinning wood in our production. Our processes make efficient use of material, and no wood goes to waste. Thanks to our range of complementary products, the surplus from one product serves as valuable raw material for another one.

We use renewable material sparingly. We know our raw materials and can trace each product to its source.

Finnish know-how

from the forest to the customer

Oy Kohiwood Ltd is an expert in sustainable wood processing. We specialise in the production of solid wood panels and furniture components. Our headquarters and production plants are located in Soini, in Western Finland, some 200 km north of Tampere. We also have a subsidiary, LamBoard Europe Ltd, in the UK.

We export the bulk of our products to customers including wholesalers, furniture manufacturers and DIY panel vendors.

Our glulam production began in 1992, and our longest customer relationships date back to the same year. We work in close cooperation with our customers to develop successful products and operating models. We do not employ intermediaries, but provide service directly to customers, taking their individual needs into account.
